

FIRE DOOR HOLDER

NEW: DUAL MODE, SOUND-ACTIVATED FIRE DOOR HOLDER

The dual mode door holder device is battery-powered and is used to legally hold open internal fire doors whilst using listen and learn technology to record the specific sound of the building's alarm to ensure doors will close upon hearing this exact sound, rather than reacting to other loud noises. The holder uses a magnet to hold the door open and when the alarm sounds, the door is automatically closed to prevent the spread of smoke and flames.

The device is fitted to the wall and a keeper plate is fitted to the top of the door so there is no damage to the floor and prevents door warping. It can be fitted to internal fire doors in less than 10 minutes and can also be floor mounted if required.

Now dual mode – Ready to protect straight from the box, ready to learn the sound of your fire alarm.

- Sound activated door holder
- Learns the sound of your fire alarm
- Battery powered supplied with two alkaline C cell batteries (Battery level feedback LCD display)
- Easy, wire free installation and programming
